Dear Hiring Manager,

I am writing to express my interest in opportunities with your company that combine rigorous analysis with applied AI delivery—the intersection where my research and industry experience converge. I am completing an M.A. in Applied Economics at East China University of Science and Technology (GPA 3.91/4.00, expected Feb 2027), with research on Chinese regional policy at international-journal revision stage and internship in economic research and AI-assisted product development at Xinhua News Agency's data arm.

My research training is built on rigorous causal inference. Two of my papers on Chinese regional policy—*Development Zone Policies, Industrial Agglomeration, and Household Income* and *Population Agglomeration and the Missing Consumption Dividen*—are at the Revised & Resubmit stage with international journals (JRS and HSSC), based on county- and prefecture-level panel data and staggered DID, instrumental variables, and event-study designs. Earlier, I led framework design, variable construction, and English writing for a project on regional light pollution that won Meritorious Winner (top 13%) in the 2023 ICM.

I pair this analytical grounding with hands-on delivery. At China Economic Information Service (Xinhua News Agency), I handled data collection, writing, and proofreading for country-industry reports which covers market size, industrial chains, competitive landscape, and policy environment. For the country risk assessment product, I collected data against an established indicator framework and built its underlying database; I also regularly retrieve, organize, and summarize recent industrial developments across countries to support the dynamic updating of the data product. In addition, with AI assistance I developed product pages, delivering HTML samples.

Previously, at the AI Department of CAICT East China Branch, I co-authored the intelligent-computing talent chapter of the Huawei-CAICT White Paper on Intelligent Computing and Large Model Talent, tracking frontier trends in AI, large models, and industry talent; assisted in drafting the data-infrastructure terminology of the Shanghai New Infrastructure Handbook; and consolidated the outcomes of the Yangtze River Delta Digital Economy Work Plan (2023) into a standardized research report.

What I would bring to your company is the combination my background offers: the economic understanding of the policy landscape, the quantitative foundation in evidence and identification, the discipline in writing and delivery, and practical fluency in AI tooling. Thank you for your consideration; I would welcome the opportunity to discuss how I can contribute.

Sincerely,

Shuhan WANG
