Shuhan WANG

M.A. Candidate in Applied Economics (Expected Graduation: Mar 2027)
East China University of Science and Technology
+86 132 5889 5111 — 20003003@mail.ecust.edu.cn — Personal Website

Research Interests

Economic sociology; computational social science; social stratification and inequality; technological change and labor markets; institutional stratification in Chinese development; quasi-experimental and computational methods.

Education

East China University of Science and Technology (ECUST) **Sep 2024 – Feb 2027 (expected)**
M.A. Candidate in Applied Economics
GPA: **3.91/4.00**; core courses: Advanced Econometrics (94), Advanced Macroeconomics (91), Advanced Microeconomics (91), Urban Economics (94), Advanced Applied Statistics (90).

East China University of Science and Technology (ECUST) **Sep 2020 – Jul 2024**
B.A. in Economics
GPA: **3.79/4.00**; thesis: *The Impact of National or Industry Standard Setters on Corporate Innovation* (Outstanding Undergraduate Thesis, ECUST 2024).

Research Experience

Development Zone Policies, Industrial Agglomeration, and Household Income: Evidence from China **Revised & Resubmit (JRS)**
Shuhan Wang (first author), Nanxin Deng, Bojun Wu

- Estimates the effect of development-zone policies on county-level household income using a 2000–2017 panel; staggered DID, PSM-DID, event study, and Honest-DID sensitivity analysis.
- Finds that the tax-incentive-led attraction model raises firm output but does not translate this growth into higher household income; the estimated effect on residents' income is negative.
- Uses Stata and Python to examine the distributional consequences of policy-led industrial agglomeration.

Population Agglomeration and the Missing Consumption Dividend: Exclusionary Urbanization and Hukou Segmentation in Chinese Cities **Revised & Resubmit (HSSC)**
Shuhan Wang (first author), Bojun Wu

- Examines population density and household consumption in a 2003–2022 prefecture-level panel using two-way fixed-effects, instrumental-variable, and interaction models.
- Finds that higher population density is associated with lower household consumption and that *hukou* restrictions amplify this negative relationship.
- Studies how unequal access to locally tied public services shapes the consumption consequences of urban agglomeration.

Working Paper

Generative AI and Skill Diversity in the Labour Market **Working Paper**

- Examines how generative-AI exposure relates to changes in skill composition and wage inequality in Chinese urban labour markets.
- Builds PPMI-based skill co-occurrence measures and a city × occupation × month panel covering 170 cities, 99 occupation categories, and approximately 120,000 observations (2021–2024).
- Uses continuous-treatment DID around ChatGPT's public release, together with event-study, mechanism, distributional, and robustness analyses.
- Connects task-based accounts of technological change with occupational closure and labour-process perspectives.

Internship and Practical Experience

Data Product Intern, China Economic Information Service (Xinhua News Agency) Jun 2026 – Present

- Collected, wrote, and proofread country–industry research reports covering market size, industrial chains, employment, competition, regional distribution, and policy.
- Supported the construction and updating of a country-risk database under an established indicator framework; produced HTML page samples with AI assistance.

Research Assistant, ECUST × Shanghai Electric Strategic Consulting Project Apr 2025 – Present

- Conducted field interviews and primary data collection to support firm-level strategy recommendations; experience in qualitative fieldwork methods.

Research Assistant, Public Economic Governance Research Center, ECUST Sep 2024 – Present

- Organized academic forum on Chinese modernization: materials preparation, communications, and on-site coordination.
- Built and maintained the center website; content management and updates.

Industry Research Intern, AI Department, CAICT East China Branch Mar 2024 – Aug 2024

- Co-authored the AI talent chapter of the *White Paper on Intelligent Computing and Large Model Talent* (Huawei–CAICT).
- Drafted the data-infrastructure section of the *Shanghai New Infrastructure Handbook* and compiled the *Yangtze River Delta Digital Economy Work Plan (2023)* into a standard report.

Honors and Awards

- Third Prize, 5th National College Student Development Economics Paper Competition 2025
- First-Class Graduate Academic Scholarship, ECUST 2024
- Outstanding Scholarship (Special Prize), ECUST 2024
- Outstanding Graduate, Shanghai Municipality 2024
- Meritorious Winner (top 13%), Mathematical Contest in Modeling (ICM) 2023

Skills

Computational Methods: Stata, Python (Pandas, NumPy, scikit-learn, Statsmodels), causal inference (staggered DID, PSM-DID, event study, IV, Honest-DID), panel data econometrics, network-based measurement (PPMI skill co-occurrence), machine learning, LLM-assisted data processing

Research Methods: Quasi-experimental design, mediation analysis, quantile regression, survey design, fieldwork and interview methods

Language: English (TOEFL 81: R22/L18/S19/W22; CET-6: 528; CET-4: 629), Mandarin (native)
